

## **ABSTRACT OF THE DISCLOSURE**

The invention relates to a tray which is used for the horizontal storage and support of bottles. The invention comprises a surface having an upper relief defining groups of housings which receive horizontal bottles. According to the invention, a wider zone and an opposing narrower zone are defined in each of the aforementioned housings. Moreover, each group of housings comprises two first parallel adjacent housings which are disposed in the same plane and a second additional elevated, inverted housing. The narrower zone of the second housing is fitted between the narrower zones of the first housings, such as to be in contact with the wider zone of same. In addition, the plane of the second housing is elevated at a height in relation to the plane of the first two housings, said height being equal to the dimension of the wider zone of the housings. The inventive device requires less space than standard systems since the bottle placed in the second housing is inserted more deeply between the other pair of housings.

## **AMENDMENT(S) TO THE SPECIFICATION**

**Please amend the title of the specification to:**

**RACK FOR HORIZONTAL HORIZONTALLY SUPPORTING AND STORING BOTTLES**  
**BOTTLE STORAGE AND SUPPORT TRAY**

**Please add a paragraph beginning at page 1, line 1:**

## **CROSS REFERENCE TO RELATED APPLICATION**

The present application is a 35 U.S.C. §§ 371 national phase conversion of PCT/ES2004/000536, filed 2 December 2004, which claims priority of Spanish Application No. U200302916, filed 10 December 2003. The PCT International Application was published in the Spanish language.
